

With IntellyGreen it is easy
to save money on your bill!!

The wireless system for your home
and office that let you save energy

The Wippy remote controller

It allows to:

- remote command the on/off switching of each single appliance
- programme the timer for the automatic on/off switching
- visualize the real time power for each single/group of appliances
- visualize the energy consumption, its cost, the CO₂ produced for each single/group of appliances
- visualize the data in a graphic way
- historicize the data up to two years
- download the data for analyses on an electronic sheet

The IntellyGreen control units

What they are:

- an energy consumption meter of each single appliance
- a remote switch
- a programmable timer
- a stand-by killer
- wireless connection to Wippy
- eConv generates fill pilot six level orders

Wippy

Wireless portable unit to programme, visualize and control

Wippy PC

Hardware and software kit for PC to visualize and command wirelessly

eConv

Wall mounted control unit for heating

eSwitch

Wall mounted control unit

ePlug

Plug & Play mobile control unit

How to save energy in few steps

1. Install IntellyGreen **in few minutes**
2. Always monitor your consumption
3. Programme IntellyGreen
4. See **how much you save** on the bill
5. SMILE 😊

How it works

An **easy-to-install** and **easy-to-use** system thanks to the SMILE function that shows if you are saving energy:

😊 you are saving

😐 you are not saving

😞 you are consuming too much

Example of functioning of IntellyGreen System

Easy to save money with IntellyGreen!!

No more unexpected high bills!! With **IntellyGreen** you can measure your energy consumption and **save money** by programming the on/off switch of each single appliance. Easy, isn't it?

name of the appliance

power consumption

daily energy consumption in kWh, euro

 **SMILE**
if you are saving

output: on/off, stand-by killer

automatic or manual mode

daily average energy consumption

Intellyreen

Patent pending

The result of a recent study by the Carbon Trust showed that **Smart Metering**, when combined with consumption data and an automatic energy saving programming device, could give potential **savings of up to 20%** on your energy bills.
